

 BUSINESS CLOUD

# Business Cloud Dynamic (IaaS)

We offer our customers a state-of-the-art data centre with virtual servers in a highly-available infrastructure, ready for use at any time. The individually selected IT resources are flexible, scalable and designed to meet current needs.

# Business Cloud Dynamic (IaaS)

## What you need

You want freely selectable applications and capacities using a cloud – without the necessity of housing a complicated IT infrastructure at your business. It is also important for you to be in control of operating systems and applications, and to be able to link them any way you choose.

## What we offer

Our 'Infrastructure as a Service' (IaaS) model provides basic IT resources but allows you to control operating systems and applications. We provide you with Microsoft Azure Stack, the basic platform which you can use to run as many virtual servers as you like, regardless of your location and according to your needs. Moreover, choose freely from a number of resources – whatever you need. The extension and modification of services is conveniently done via the Business Cloud Portal.

## Highly available and secure

Business Cloud Dynamic (IaaS) is operated in the Tineo Datacube in Münchenstein. In the most innovative data centre in Switzerland, your data is highly available and optimally protected against burglary, abuse and natural events (earthquake, flood, fire or lightning).

## Business Cloud Dynamic (IaaS) services

- > Private VLAN
- > Public IP address included
- > Free Gateway to secure the private network
- > Individually selectable resources
- > Full administration rights over the systems
- > Add new systems and networks as desired

## Available resources

- > vCPU
- > R.A.M.
- > Standard Storage
- > Premium Storage
- > Public IP
- > V-Net

Would you like to experience what the future holds for you?

We will gladly advise you and show you, based on your business model, how you can profit.
